

Wound Care Billing

There is no substitute for experience. As a Wound Care specialist you know that. Wound care billing requires specialized coding and billing knowledge, correct credentialing and experience dealing with multiple place of services and different billing situations. We have done credentialing and currently do coding and billing for several wound care specialties.

Whether you are considering a new practice or have an existing practice, we will take care of credentialing and making sure credentialing is correct.

We begin with a review of Fee Schedule to make sure it's up to date. Often we find certain codes where if bill rate is adjusted higher, insurance will reimburse.

There are certain wound care procedures which also have Add-On codes & needs to be billed along with the main procedure if the wound region is more than the standardized unit.

Only identifying the Procedure code is not sufficient, wound care biller should know how the code has to be billed & at what particular frequency. We know how exactly it has to be billed in wound care billing, to get optimized reimbursement.

For our Wound Care practices 90.5% insurance payments were within 30 days and 97.6% within 60 days of the date patient was seen.

How is your practice doing with collections?
